

FACTORY TRAINING

Diode LED Factory Training is an immersive, hands-on learning experience designed to help lighting professionals build confidence with products, system design, installation, troubleshooting, and real-world applications while learning directly from the Diode LED team in Reno.

STANDARD TRAINING

Best for professionals who want a strong foundation in Diode LED products, lighting fundamentals, system design, and real-world applications.

- Lighting industry and Diode LED overview
- Application inspiration and product fundamentals
- Light quality and performance basics
- System Design 101 and Troubleshooting Scenarios
- Hands-On Light Lab and Design Exercises
- Reno Operations and Office Tour

INTERMEDIATE TRAINING

Designed for professionals ready to move beyond the fundamentals with deeper system integration, installation techniques, troubleshooting, and hands-on application training.

- Light quality and performance examination
- New and Specialty Product Exploration
- System Design Scenarios and Integration
- Installation Tips and Troubleshooting
- Expanded Hands-On Light Lab Workshop
- Product Prototypes and Collaborative Design Exercises

ADVANCED TRAINING

Built for experienced lighting professionals who want to strengthen their technical expertise in dynamic lighting, advanced controls, project execution, and complex system design.

- TM-30 and LM-79 Report Interpretation
- Advanced System Design Scenarios
- In-Depth Dynamic Lighting System Design
- Technical Installation and Project Management
- Hands-On Light Lab with Advanced DMX
- Final Team Design Project and Problem-Solving Exercise
